COMmander® VMF Module

Central 8-channel voicemail and fax system with up to 120 voicemail and 120 fax boxes for COMmander 6000

- 80 voicemail and 80 fax boxes for subscribers and groups (teams), expandable up to 120
- 8 voicemail and fax channels, expandable up to 16
- Fax sending from the desktop via the network (Windows 7/8/10)
- No maintenance or operation costs for fax machines
- Recording of up to 120 hours of voice messages incl. announcements or up to 3,500 fax pages (with 4 gigabytes of memory; supplied)

Your advantages in detail

With the COMmander VMF Module you will get a central voicemail and fax solution for the COMmander 6000, capable of meeting the most stringent demands and leaving nothing to be desired!

During your absence, simply forward your extension to your personal voicemail box and greet the caller with a customised announcement based on the forwarded number. Using the corded COMfortel system telephones to operate the central answering ma-

chine is child's play – just like you are used to with telephone answering machines.

The classic sending and receiving of fax messages with lengthy waiting periods while sending, and due to paper jams, lack of toner and the long distances to the fax machine, is a thing of the past when using this central voicemail and fax solution. Fax correspondence all takes place on the workstation screen directly. Voice and fax messages are sent automatically by e-mail if desired.
