

## **FONtevo presents its professional IP-DECT multi-cell system**

### **Diverse application purposes thanks to its high scalability**

*FONtevo is now offering a new professional IP-DECT multi-cell system. The solution is freely scalable, impresses with a reliable call transfer between the individual radio cells and, thanks to the zero touch provisioning, can be set up quickly.*

**Cremlingen, 31 July 2019** – Auerswald, one of the leading German manufacturers of ICT systems and IP telephones, is expanding its portfolio to include a professional IP-DECT product range. The system consists of an IP-DECT server as well as the respective handsets, and is freely scalable. The interruption-free call transfer between the individual radio cells is also always ensured – even in the case of very large areas.

The new Auerswald IP-DECT professional system can be implemented flexibly. The single solution with the base station COMfortel WS-500S is particularly suitable for doctor's practices and smaller office environments. One base can integrate up to 20 handsets. Moreover, the IP-DECT server, COMfortel WS-500M, enables you to establish a multi-cell solution. For example, care homes or shipping companies could connect a maximum of 10 base stations for up to 60 participants. For more expansive areas, such as in garden centres, sports halls or museums, it is also possible to provide 60 IP-DECT servers for up to 250 participants.

The three new FONtevo IP-DECT handsets with their wealth of professional features are also impressive. All terminal devices offer a long battery life and enable 12 hours of talk time. The high-quality polymer surface means that they are also resistant to disinfectant and scratches. As a base model, the COMfortel M-510 can be used in a variety of applications, and enables all the important comfort functions such as hands-free calling, an online address book or Bluetooth. The business handset, COMfortel M-520, is also impressive on account of its elegant design and a large 2.4-inch colour display. The COMfortel M-530 is particularly robust and has been developed especially for tough conditions: The handset is provided with a shock-resistant and non-slip rubberised housing, and it is also certified in accordance with IP65, and therefore protected from dust and spray water.

The new IP-DECT multi-cell series is available from the end of August. In addition, the Auerswald firmware update 7.4 for the ICT systems COMpact 4000, COMpact 5200(R), COMpact 5500R and the COMmander 6000 series enables a zero touch provisioning for the devices.
